

Global COVID-19 Clinical Platform

NOVEL CORONAVIRUS (COVID-19) - RAPID VERSION

DESIGN OF THIS CASE RECORD FORM (CRF)

This CRF has 3 modules:

Module 1 to be completed on the first day of admission to the health centre.

Module 2 to be completed on first day of admission to ICU or high dependency unit. Module 2 should also be completed daily for as many days as resources allow. Continue to follow-up patients who transfer between wards.

Module 3 to be completed at discharge or death.

GENERAL GUIDANCE

- The CRF is designed to collect data obtained through examination, interview and review of hospital notes. Data may be collected retrospectively if the patient is enrolled after the admission date.
- Participant Identification Numbers consist of a site code and a participant number.
 You can obtain a site code and register on the data management system by contacting ncov@isaric.org.
 Participant numbers should be assigned sequentially for each site beginning with 0001. In the case of a single site recruiting participants on different wards, or where it is otherwise difficult to assign sequential numbers, you can assign numbers in blocks or incorporate alpha characters. E.g. Ward X will assign numbers from 0001 or A001 onwards and Ward Y will assign numbers from 5001 or B001 onwards. Enter the Participant Identification Number at the top of every page.
- Data are entered to the central electronic REDCap database at https://ncov.medsci.ox.ac.uk or to your site/network's independent database. Printed paper CRFs may be used and the data can be typed into the electronic database afterwards.
- Complete every section. Questions marked "If yes,..." should be left blank when they do not apply (i.e. when the answer is not yes).
- Selections with square boxes (
) are single selection answers (choose one answer only).
- Selections with circular boxes (**O**) are multiple selection answers (choose all that apply).
- Mark 'Unknown' for any data that are not available or unknown.
- Avoid recording data outside of the dedicated areas.
- If using paper CRFs, we recommend writing clearly in ink, using BLOCK-CAPITAL LETTERS.
- Place an (X) in the boxes to mark the answer. To make corrections, strike through (------) the data you wish to delete and write the correct data above it. Please initial and date all corrections.
- Please keep all of the sheets for a single participant together e.g. with a staple or participant-unique folder.
- Please transfer all paper CRF data to the electronic database. All paper CRFs can be stored by the institution responsible for them. All data should be transferred to the secure electronic database.
- Please enter data on the electronic data capture system at https://ncov.medsci.ox.ac.uk. If your site would like to collect data independently, we can support the establishment of locally hosted databases.
- Please contact us at <u>ncov@isaric.org</u>. If we can help with databases, if you have comments and to let us know that you are using the forms.

MODULE1: complete on admission/enrolment

MODULE 3: complete at discharge/death

OUTCOME

Is the patient infected with a variant of concern (VOC) ?

□ Unknown

- □ No: Variant is known and no VOC identified
- □ Yes: Delta B.1.617.2, identified Oct 2020
- □ Yes: Omicron, B.1.1.529, identified Nov 2021
- □ Yes: Alpha B.1.1.7, identified in UK Sept 2020
- □ Yes: Beta B.1.351, identified in South Africa May 2020
- □ Yes: Gamma P.1, identified in Brazil Nov 2020
- □ Yes: Epsilon B.1.427/B.1.429, identified in USA Mar 2021
- □ Yes: Zeta P.2, identified in Brazil Apr 2020
- □ Yes: Eta B.1.525, identified in Multiple Countries Dec 2020
- □ Yes: Theta P.3, identified in Philippines Jan 2021
- □ Yes: lota B.1.526, identified in USA Nov 2020
- □ Yes: Kappa B.1.617.1, identified in India Oct 2020
- □ Yes: Lambda C.37, identified in Peru Dec 2020
- □ Yes: Mu B.1.621, identified in Colombia Jan 2021
- □ Yes: A variant not listed above

Please check the REDCAP database for variants not listed above. New variants will be added to the database as they are identified.

If omicron variant was identified, what method was used to identify it?

Genomic sequencing S-gene target failure (SGTF) testing PCR genotyping Unknown or untested

Outcome: Discharged alive Hospitalized Transfer to other facility Death Palliative discharge Unknown

Outcome date: [_D_][_D_]/[_M_][_M_]/[_2_][_0_][_Y_][_Y_] □Unknown

If Discharged alive: Ability to self-care at discharge versus before illness:
Same as before illness
Worse
Better
Unknown
